SUMMARY

Entry-level SOC Analyst with hands-on experience in log analysis, alert triage, and network traffic investigation using Splunk, Wireshark, and SNORT. Built and operated a home SOC lab to detect authentication anomalies, brute-force attempts, and scanning behavior. Strong foundation in TCP/IP networking, Windows/Linux environments, and defensive security operations. Currently completing AAS in Cybersecurity (GPA: 3.96) with a focus on Tier 1 SOC monitoring and threat detection.

TECHNICAL SKILLS

- Security Operations & SIEM
- Splunk (log analysis, alert triage, correlation)
- Incident detection, authentication anomaly analysis
- False positive identification & alert prioritization
- SIEM monitoring
- Alert triage workflows
- IOC validation
- MITRE ATT&CK technique mapping

Network Security & Analysis

- TCP/IP, VLANs, NAT, DHCP
- Wireshark packet analysis
- Cisco routing & switching fundamentals

Threat & Vulnerability Tools

- Nmap, Nessus, SNORT
- Metasploit (attack simulation exposure)
- Burp Suite (web vulnerability testing exposure)
- Hashcat, Aircrack-ng (password/security testing concepts)

Systems

- Linux (Kali, Parrot, Ubuntu)
- Windows Server, Active Directory, Group Policy

Security Concepts

- Access control, authentication, cryptography basics
- Introductory MITRE ATT&CK mapping

HANDS-ON SECURITY EXPERIENCE

Security Operations & Threat Analysis (Lab-Based)

- Investigated authentication logs in Splunk to identify brute-force attempts and suspicious login patterns
- Correlated multi-source log data to detect anomalies and simulate SOC-style alert triage workflows
- Analyzed network traffic using Wireshark and SNORT to detect scanning activity and unusual connections
- Performed vulnerability scanning with Nessus and prioritized findings based on severity and exploitability
- Simulated attack scenarios in controlled environments to evaluate detection and response effectiveness

- Distinguished false positives from true security events by reviewing authentication patterns, network behavior, and host activity
- Network & System Security
- Configured VLAN segmentation on Cisco switches and routers in lab environments to simulate enterprise isolation strategies
- Troubleshoot inter-VLAN routing issues to restore communication between segmented networks
- Implemented NAT and DHCP services in multi-subnet environments to simulate enterprise network operations
- Used Cisco IOS commands and Packet Tracer to diagnose connectivity and configuration issues

PROJECTS

Home SOC Lab

- Built a virtual SOC environment using Kali Linux and Windows systems
- Simulated attacks including brute-force login attempts and port scanning
- Monitored and analyzed logs to identify indicators of compromise (IOCs)
- Practiced Tier 1-style escalation decisions based on log evidence and event severity

Network Infrastructure Lab

- Configured Cisco switching and routing for VLAN-based segmentation
- Captured and analyzed network traffic using Wireshark to validate segmentation behavior

Digital Forensics Practice

- Analyzed disk images using FTK Imager and OSForensics
- Examined file systems, registry artifacts, and metadata to identify suspicious activity

EDUCATION

Associate of Applied Science in Cybersecurity Carroll Community College

Expected 2026 GPA: 3.96

CERTIFICATIONS

SOC Operations Analyst I (SOCOA I) - BCR Cyber (2025)

PROFESSIONAL EXPERIENCE

Preschool Teacher - Baltimore County Public Schools (2022–2026)

- Managed structured, high-responsibility environments requiring rapid decision-making
- Communicated clearly with staff and families under time-sensitive conditions
- Maintained consistent procedures and behavioral monitoring in high-pressure settings
