SUMMARY

Working toward an AAS in Cybersecurity (3.96 GPA) with a home-built SOC lab where I run brute-force detection, log correlation, and traffic analysis using Splunk, Wireshark, and SNORT. Most recently spent 2026 supporting IT operations across 43 Carroll County Public Schools sites handling account security, device compliance, and Tier 1-style troubleshooting at scale. Comfortable moving between Windows and Linux environments and looking to bring that hands-on security and IT foundation into a Tier 1 SOC role.

TECHNICAL SKILLS

Security Operations & SIEM: Splunk log analysis and alert triage, IOC validation, MITRE ATT&CK mapping, false-positive review

Network Security: TCP/IP, VLANs, NAT, DHCP, Wireshark packet analysis, Cisco routing & switching

Threat & Vulnerability Tools: Nmap, Nessus, SNORT, Metasploit, Burp Suite, Hashcat, Aircrack-ng

Systems: Linux (Kali, Parrot, Ubuntu), Windows Server, Active Directory, Group Policy, Microsoft Intune

Security Concepts: Access control, authentication, cryptography basics

HANDS-ON SECURITY EXPERIENCE (LAB-BASED)

- Reviewed authentication logs in Splunk and flagged brute-force patterns and unusual login behavior.
- Correlated log data across multiple sources to practice the kind of alert triage a Tier 1 analyst handles day to day.
- Wireshark and SNORT were my go-to tools for catching scanning activity and odd connection patterns on the network.
- Ran Nessus scans and ranked findings by severity and exploitability, then built controlled attack scenarios (brute-force logins, port scans) to test what detection actually caught.
- Learned to separate a false positive from a real event by cross-checking authentication patterns against host and network activity.

PROJECTS

Home SOC Lab: Built and ran a virtual SOC (Kali Linux + Windows) for several months, simulating brute-force logins and port scans, then logging and triaging IOCs Tier-1 style.

Network Infrastructure Lab: Configured VLAN segmentation, NAT/DHCP, and Cisco routing across a multi-subnet lab; validated behavior and troubleshooted routing issues using Wireshark, IOS commands, and Packet Tracer.

Digital Forensics Practice: Examined disk images, file systems, registry artifacts, and metadata using FTK Imager and OSForensics.

PROFESSIONAL EXPERIENCE

Carroll County Public Schools – Technology Services

Help Desk / IT Support Technician

2026

- Resolved MFA resets, account lockouts, and password issues for staff and students, using Active Directory and User Management tools to support and audit account access.
- Handled help desk ticket volume across 43 school sites, walking users through fixes by phone and remote tools like Quick Assist.
- Kept device security posture current with Dell Command | Update and enforced Intune compliance through Company Portal and Software Center deployments.
- Independently led rollout at multiple district sites, deploying 6,000+ new devices for the 2026–2027 school year without onsite supervision.
- Reimaged 1,000+ devices with updated Intune policies and district security configurations, then ran full update and compliance cycles on each.
- Managed end-of-life device transitions — wiping, staging, and inventory-auditing retired hardware while configuring new systems for handoff.

Baltimore County Public Schools

Preschool Teacher

2022-2026

- Kept a structured, high-responsibility environment running smoothly under time-sensitive conditions, with consistent procedures and behavioral monitoring.
- Communicated clearly with staff and families, often needing fast, calm decision-making.

CERTIFICATIONS

- SOC Operations Analyst I (SOCOA I) - BCR Cyber (2025)

EDUCATION

- Associate of Applied Science in Cybersecurity - Carroll Community College (Expected 2026), GPA: 3.96
